BookerBob.

Google for agentic commerce.

Proof of loyalty, everywhere you go.

Trust in travel is bought, and loyalty costs your data.

Reviews anyone can buy

Platforms show thousands of stars and none of them prove a stay. A guest, or the guest's AI agent, cannot tell a real review from a paid one.

Loyalty paid for with your data

A returning-guest discount means handing over your identity and your history. You pay for the perk with a profile that follows you everywhere.

Agents now shop for people. They need context they can verify, and people need it to stay theirs.

Prove you were a customer. Reveal nothing else.

One zero-knowledge membership proof, verified on Stellar. Only its scope changes between uses.

01 REVIEWS

reviews nobody can buy

One review per proven stay. The author stays anonymous, the nullifier stops a second one.

02 PERKS

perks that stack, privately

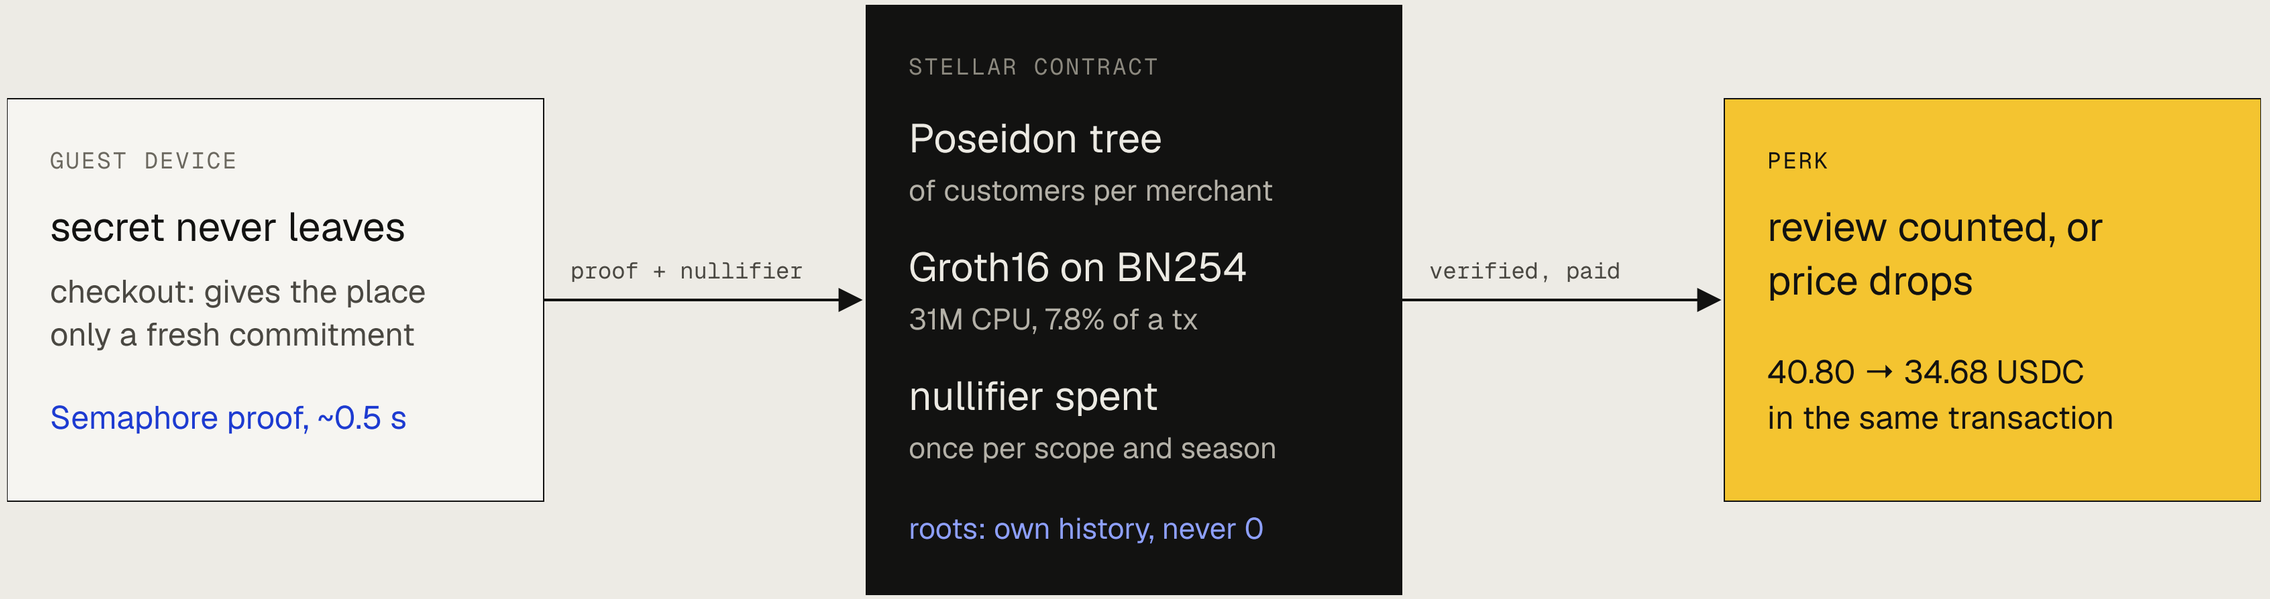

Returning guest 10%, BookerBob network 5%, REP verified traveler 5%, capped at 15%. One USDC payment.

03 AGENT CHECKOUT

your agent shops for you

Over UCP, the open protocol agents shop with, at a real Shopify store, with your proven discount.

proof → Stellar → perk

The place learns: a valid proof for its own customer list, a payer used once, a new commitment. Not who, not which visit.

Zero-knowledge is native here.

BN254 HOST FUNCTIONS

31M

CPU to verify a Groth16 proof on chain. 7.8% of the 400M per-transaction limit.

POSEIDON PERMUTATION

1.1M

CPU for a customer-tree insert, circomlib compatible, the same root as the browser.

USDC VIA SAC

1 tx

Proof, nullifier, discount and payment settle together. Nothing to reconcile.

COST

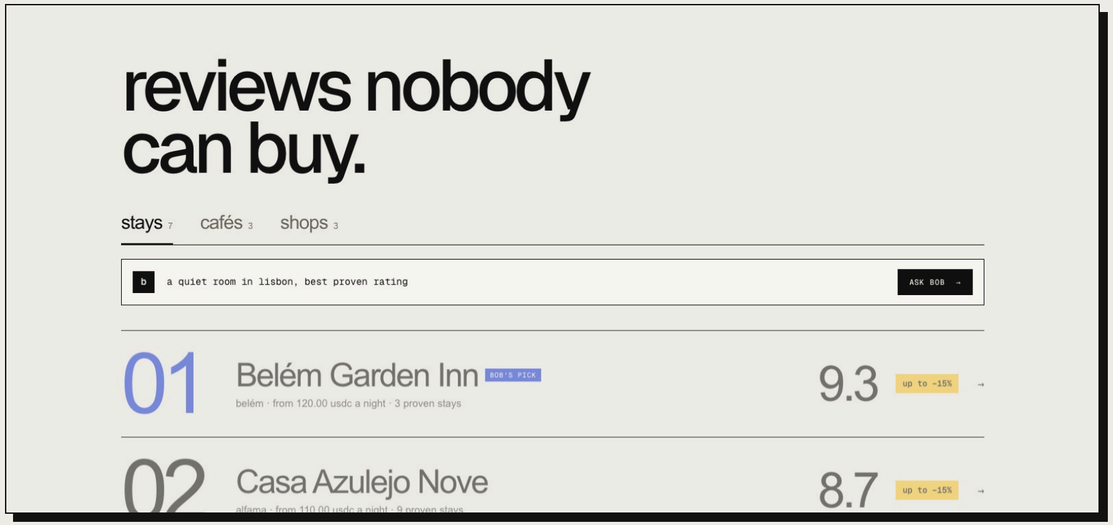

1.13

XLM for a discounted booking on testnet, mostly storage rent. Proof on chain: 256 bytes.

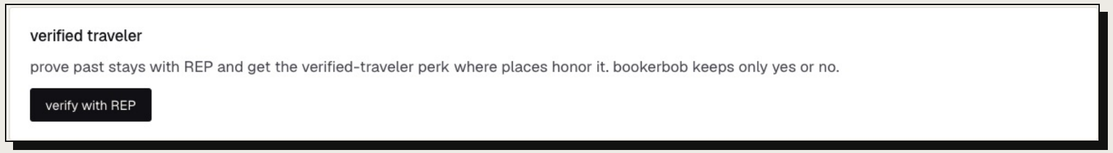

P-256 REP verdicts verified natively on Stellar (built and tested; off in the demo for privacy; production = tier-only verdicts).

Protocol 29 · soroban-sdk 28 · Semaphore v4. Passkey login today derives an Ed25519 key; secp256r1 (P-256) verification on chain is the next step for passkey smart accounts.

ASK BOB: RANKED BY PROVEN REVIEWS ONLY

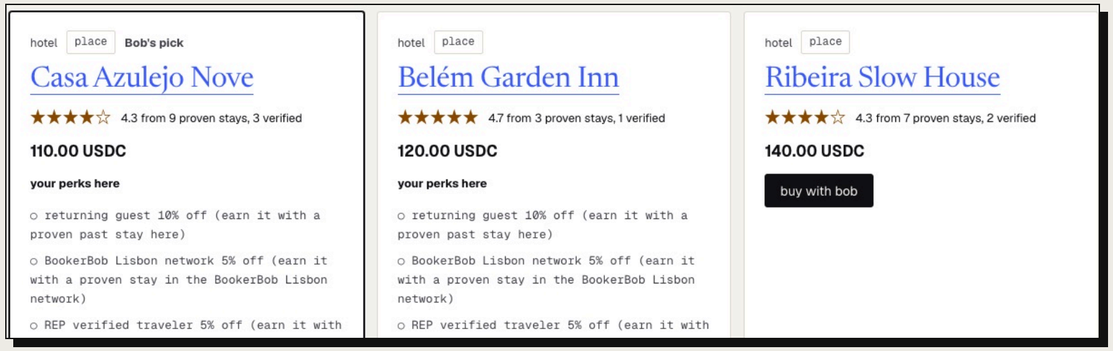

REP VERIFIED TRAVELER: PHONE APPROVES, BOB KEEPS YES OR NO

AGENT AT A REAL SHOPIFY STORE, OVER UCP, PERKS STACKED

```
store offers: returning customer 10%, BookerBob
  Lisbon network 5%, REP verified traveler 5%; cap 15%
2 proof(s) generated: returning customer 10%
  + BookerBob Lisbon network 5% (cap 15%)
store verified 2 claim(s) against the Stellar
  contract: 15% off, single-use code BB-563A…
code applied by the store: -22.50 AED
store co-signed book_with_context:
  40.80 USDC before discount, pays 34.68 USDC
paid 34.68 USDC on Stellar, tx 7ad07439…
order #1012 completed
store saw: a valid proof, a fresh payer, a fresh
  customer code. Not who the buyer is.
```

Anyone who can vouch adds a group. Places choose what to reward.

ATTESTED GROUP

REP verified traveler

Past Airbnb or Booking stays proven with zkTLS in the REP app. BookerBob checks REP's signed verdict and adds a fresh identity. Live since today's device run.

CHAIN GROUP

BookerBob network

A stay at any member place enrolls you, so a guest of one Lisbon place is a known guest at all of them, without anyone knowing who.

NEXT

Stellar wallet history

Already in the app as connect, score, attest from Horizon. It plugs in the same way: one operator key, one group, one line of policy.

Each provider owns its group and only it can add members. The provider never learns where a perk is used; the place never learns who used it.

Private by default. Accountable when needed.

PARTY	SEES	NEVER SEES
The place	✓ an order, a proven badge, a fresh commitment	× who you are, which past visit
The public	✓ reviews and their proofs, tree roots	× names, wallets behind reviews
The arbiter	✓ one stay, only if you disclose in a dispute	× anything else
BookerBob	✓ "REP verified: yes or no"	× your tier, spend, platform or device key
Nobody	sees your secret. It never leaves your browser.	

Any place where you were a customer.

LIVE TODAY

UCP merchants

One Shopify store works end to end. Any UCP merchant takes the same extension.

NEXT

Tier-only REP

Store-scoped verdicts that carry only a tier, so even the attester's signature says nothing more.

NEXT

Multisig upgrade

The contract upgrades in place today with one admin key; that key moves to a multisig.

NEXT

JMPR booking

Real Lisbon hotels already in Ask Bob. Booking through JMPR, with the stay checked in as proof.

Restaurants, events, subscriptions: anywhere reviews and loyalty are paid for with someone else's data today.

BookerBob.

Built in Lisbon, for Stellar.

TRACK RECORD

ETHGlobal Lisbon: 2nd place World AgentKit, 2nd place The Graph.
